

MR. MARK'S MONTHLY MAINTENANCE TIP
Squaring the Steel Shaft

In order to get the maximum life from you tail bearings it is extremely important that the tail shaft is adjusted in its final position completely square with the flange on the intermediate box.

When the bearing is under misalignment early failure is possible. That is why it is very important to square the steel shaft when adjusting proper chain tension.

See Mr. Mark's Monthly Maintenance Tip on Chain Tension for the month of December. If you would like that issue faxed or e-mailed please contact Dessi Tchotchkova at dessi@tramcoinc.com

If you or an associate would like to receive these monthly tips, please fill in the blanks and send this fax back to us. Thank you!
